

**TUGGERS  
and PUSHERS**

**WHY POWERED TUGGERS ARE BEST TO  
CHOOSE OVER FORKLIFTS? EXPLAINED!**

Advance material handling in warehouses is the need of the hour to meet the increasing customer demands. Forklifts were in use for a very long time as the primary tool for market handling but they have several downsides including limited operational capability. However, powered tuggers now emerged as the best alternative to forklifts and these are popularly used in the lean warehousing industry due to their flexibility and easy-to-use features. Best powered tugger in Canada handles multiple material handling tasks including material delivering, picking, load movement, and many more.

Here are the advantages of using powered tuggers to streamline the warehousing operation.

## Capable to carry multiple loads

Powered tuggers are designed to carry multiple loads at once. In this way, it improves efficiency, cuts the operation time, and elevates the output without expanding the fleet of material handling equipment.

## Maximum safety while operating

Since, material equipment is designed to provide utmost safety while operation and therefore, powered tuggers are the first choice of the industrial operators. These are easy and designed to handle heavy and bulk loads without jeopardizing the safety of the operators.

Available at lesser price compared to the conventional material handling equipment

Price is another vital factor that attracts maximum people towards powered tugger for sale in Canada. Since these are available at a lesser price, operators don't have to spend a big chunk of their investment on purchasing this crucial equipment. This is another reason for the popularity of powered tuggers.

Easy to maneuver

Conventional forklifts were limited to only being to operate on the perimeter of the warehouse and racking. It creates constraints on your routes, material handling flow, and the way you are organizing the inventory.

**Minimize the chance of product damage**

**Tuggers are perfect to operate in any type of stiff surface or narrow area. So, there is no threat of toppling any product from the upper rack rather they provide smooth handling of the loads without hampering others. In this way, the chance of damaging any material gets lessened.**

**These are a few things that make the tuggers more efficient and profitable compared to conventional forklifts.**
